

Model 1804-1807

Enhanced Accuracy Rotary Torque Sensor

Model 7927 shunt cal reference box included with each purchase of 1800 Series.

DESCRIPTION

A line of enhanced accuracy rotary transformer torque sensors often ideal for test installations running long-term durability testing. Non-contact nature of the signal transfer virtually eliminates the need for maintenance. High overload protection with high signal output helps prevent potential damage to the sensor. Carrier frequency excitation provides increased signal/noise im-

munity. Extended speed range allows shaft rotation up to 27000 RPM. Capacity range from 100 in-lb to 100000 in-lb for shaft mounting configurations.

FEATURES

- 100 in-lb to 100000 in-lb capacities
- 0.05 % non-linearity and hysteresis
- Enhanced accuracy
- High overload protection with high signal output (sensitivity)
- Extended speed range, up to 27000 RPM
- Minimal maintenance due to “bearings only” contact
- Carrier frequency excitation provides increased signal/noise immunity
